CATALOGUE AND PRICE LIST

SECTION P

STATION SIGNALS

Train Order Flag Station

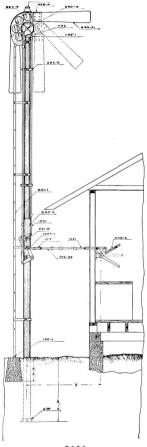

On the following pages we illustrate mechanically operated Semaphore Signals of the Two Blade Type as commonly used for Train Order and Telegraph Block Signals.

We illustrate only the more prominent types. From the illustrations it will be seen that almost any desired combination can be had from the complete line of operating levers, spectacle castings, masts, etc., manufactured by us. Practically each Signal may be equipped with any desired operating lever or spectacles suitable, shown in catalogue.

The illustrations show operating levers on ground floor; it is self-evident that they may be located at any convenient point as in Block Towers on first or second floor, station, shanty, etc.

Signals may be located across tracks from operating levers in which case it is customary to run pipe or wire lines through oil filled pipes equipped with Stuffing Boxes.

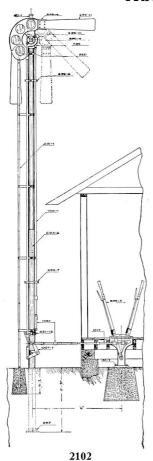

Prices on any combination desired and not shown herein will be cheerfully furnished.

FLAG STATION SIGNALS

Flag Station Signals as shown above can be mounted on Station Platforms, Concrete Foundations, or are furnished with our Standard Underground Base for setting them directly into ground. They can be furnished for One or Two Light Indication with any desired color Roundels. One Light Indication shows a stop signal only, while handle is being held down. Two Light Indication normally shows a clear signal, and when pulled down a stop signal, letting go of handle restores signal blade to clear. Oil Lamps or Electric Lamps can be used for illumination.

Signals as shown are equipped with 8' Iron Pole, but any length Pole can be furnished. These Signals are in every way modern and are substantially constructed, as the Signals are usually placed at Flag Stations where there is no agent and where chances of malicious persons tampering with them and damaging them are great, the simplicity and durable construction is of great importance.

FLAG STATION SIGNALS

Lamps are not included in prices below, they must be ordered separately, but Signals are furnished with Roundels. Orders should specify number and color of Roundels required.
